WHO WE ARE

A leading international EPC player, BBMPS supports its clients as a single point of contact, from engineering to commissioning. We design and deliver turnkey, technology-driven, tailor-made solutions capable of meeting the most complex challenges, including in the most demanding environments.

With our multi-sector expertise and state-of-the-art industrial capabilities, we master the entire value chain: engineering, fabrication, procurement, construction, maintenance, and commissioning.

Performance, innovation, and responsibility guide every project we undertake in the energy and industrial sectors worldwide, with an unwavering commitment to quality, safety, and sustainability.

OUR VALUES

QUALITY

Striving for excellence in every detail, without exception.

RELIABILITY

Delivering consistent performance our partners can depend on.

SAFETY

Ensuring secure operations and a protected working environment at all times.

INNOVATION

Creating forward-thinking solutions and technologies that drive added value.

RESPONSIBILITY

We meet our commitments, deliver lasting quality, and act with integrity in everything we do.

LONG-TERM RELATIONSHIPS

Building lasting partnerships grounded in trust, commitment, and continuous support.

OUR EPC SERVICES

TRUSTED PARTNERSHIP.

We build our clients' trust through solid expertise and proven experience in delivering complex projects, regardless of environment. From construction to performance optimization, we secure and enhance the long-term value of energy assets.
Through our integrated structure, we align capabilities to ensure seamless design, controlled execution, and efficient project management.
We support clients at every stage of the asset lifecycle: engineering, construction, operation, training, and decommissioning.

PROJECT DELIVERY EXCELLENCE.

Leveraging its vertically integrated model, BBMPS controls the entire value chain, from engineering to commissioning. Design, project management, procurement, fabrication, and construction are all managed by our in-house teams, ensuring consistency, agility, and full control at every stage.
Unlike traditional approaches that rely on multiple contractors, BBMPS acts as a single point of contact. This structure enables us to optimize costs, shorten delivery schedules, and guarantee consistent quality throughout the project lifecycle.

INTEGRATED DELIVERY.

We design, deliver, and secure tailored projects to ensure more efficient and controlled operations. By combining advanced engineering with construction excellence, we provide reliable energy infrastructure while reducing uncertainty.
We support our clients throughout the entire project and asset lifecycle: new builds, performance optimization, latelife asset management, and decommissioning.
Our integrated model enables us to operate across the full energy value chain, from upstream to downstream, including emerging sectors and renewable energy developments.
